

Sabre IX is a flexible; battery powered LED lamp, with a 122mm flexible 4Ø Swan-neck stem supporting a metal shrouded High-brightness LED. The shroud is only 8.9Ø & can be put through adjacent tone holes to illuminate pads which are difficult to get to, e.g. on Bari Saxes or C & D# on Altos etc. This is mostly done without removing keywork but in some cases removing a Palm key or Trill gives the desired access to the upper body.
